

Amendments to the Specification:

Please replace the paragraph beginning at page 4, line 9, with the following amended paragraph.

Portable device 100 can print using a printer 116 by transferring print data to printer ~~117-116~~ through the internet 105. For example, portable device 100 makes wireless connection with internet 105 via an internet service provider (ISP) 107. A server ~~106-111~~ is connected to internet 105 via an ISP 106. The data transferred to server 111 for printing on printer 116 can include data to be directly printed on printer 116, and can include one or more references to content rich data residing on or accessible to server 111. Server 111 accesses the referenced content rich data and forwards the accessed data to printer 116 for printing.

Please replace the paragraph beginning at page 4, line 17, with the following amended paragraph.

Portable device 100 can print using a printer 120 by transferring print data to printer 120 through a local network 108. For example, portable device 100 makes wireless connection with local network 108 via a network service provider (NSP) 109. A server 114 is connected on local network 108. The data transferred to server 114 for printing on printer ~~116-120~~ can include data to be directly printed on printer 120, and can include one or more references to

content rich data residing on or accessible to server 114. Server 114 accesses the referenced content rich data and forwards the accessed data to printer 120 for printing.
